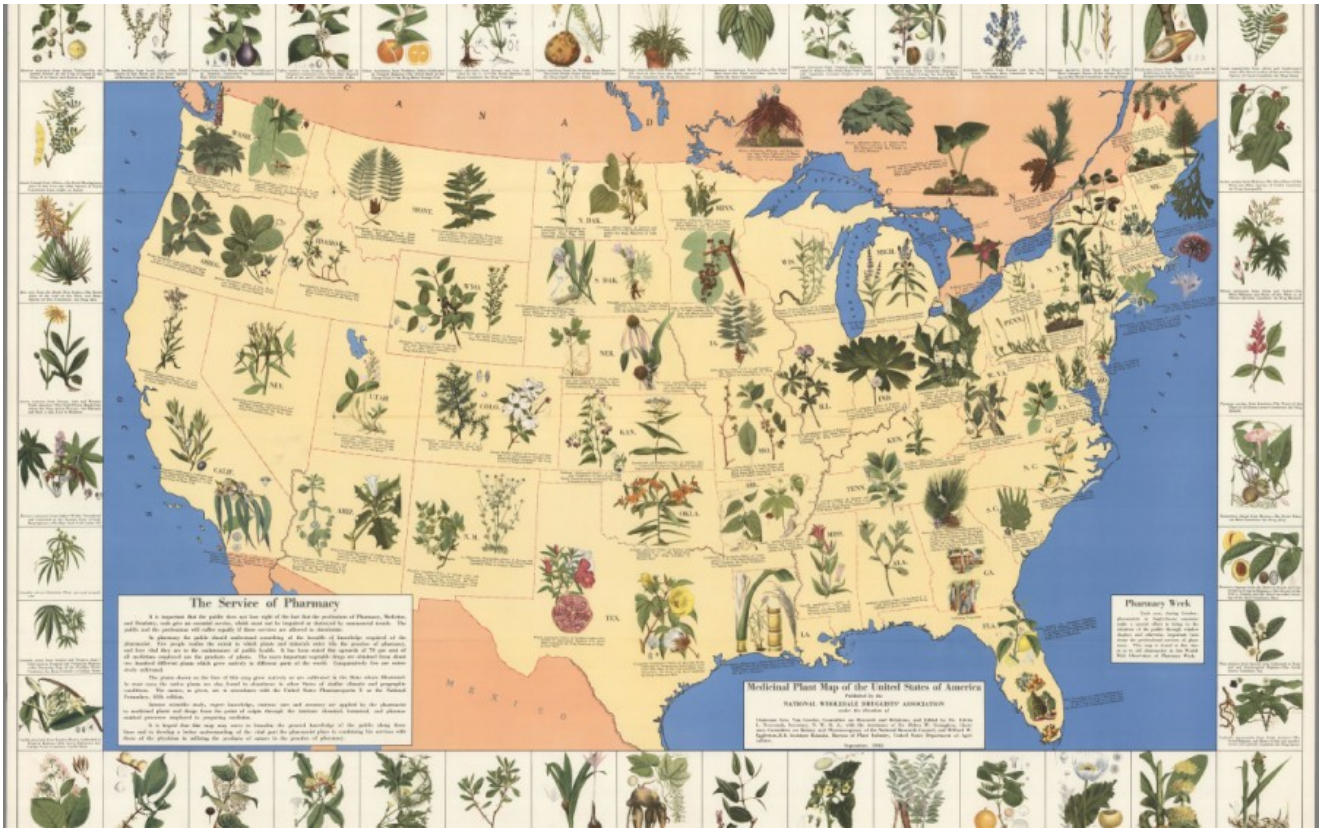
Amazing 1930's Pharmacist Map of 'Herbal Cures' Released to Public

By bestfolkmedicine · 16/07/2018 · 3 min read



Dating all the way back to 1932, the map we are presenting today contains natural, herbal remedies and herbs used in medicinal purposes that were commonly used to treat ailments in this period. If you are on a quest to find out more about natural ways of healing illnesses, this map contains everything you'll ever need to know about treating disease in a natural way, with no use of chemicals. The map was used by both pharmacists and the general public, and it truly revels a whole world of natural medicine knowledge. (View the map here)

This map is helping people around the globe, as their trust in the modern medical and pharmaceutical community fades, as they shift from communities into industries. The head editor of the *New England Medical Journal*, Dr. Marcia Angell, clinical research can simply not be trusted anymore, and we cannot rely on the judgment of doctors and medical experts. She, and many of her colleagues, share a belief that the research and claims behind new drugs that show up daily is most commonly untrue or misleading.

Former editor of the *New England Medical Journal*, and present professor of medicine at *Harvard*, Arnold Seymour Relman, also claims that corruption plays a major role in these circles. He says that medical expertise and opinion is easily bought by the pharmaceutical industry, and this includes all aspects of medicine: teaching, research, and practice.

Even though pharmacy and medicine are supposed to be in service of the general population and people, this essential service has gone astray, and more and more people are losing faith in them, and resorting to alternative medicine instead.

Back in the 1930s, 70 percent of all medical remedies was based on plants and herbs. Nearly a century later, we are fully reliant on chemicals to produce meds. Most of these medications are not even effective, as they are commonly only aimed at managing symptoms, rather than eliminating the cause. Virtually every medicine we take comes with a dozen side effects. Pills that are meant to eliminate fever can cause headache, pills that are supposed to manage heart conditions can cause stroke, and even the simple pill for erectile dysfunction can cause heart attack.

ezstandalone.cmd.push(function () { ezstandalone.showAds(131); });
As millions and millions of people switch to natural herbs and remedies to treat various health conditions, the pharmaceutical industry just keeps pumping out one product after the other. Pills that cost them cents to produce are sold for hundreds of dollars, basically infringing on our human right to be treated and healed. All that, while the cure is right there, in the nature around us.

Some conditions are, unfortunately, not treatable with natural remedies, and that can be devastating for those suffering from them. However, most of the symptoms of every major disease, as well as side effects of drugs used to treat them, can be lessened with herbs or natural remedies. Look at the

map, you'll find everything you need there.
