7 Herbs You can Grow in Water whole Year Round

Basil

Growing it is pretty easy-use cuttings from a basil plant and cut the lower leaves. Leave 2 to 3 on the top.

ezstandalone.cmd.push(function () { ezstandalone.showAds(131); });
Put them in a transparent glass jar filled with filtered water so that only 60 percent of the stem is submerged in water.

Place it in an area where it will get indirect sunlight, especially morning one. Replace the water every 2 to 3 days.

Rosemary

Just take 6 to 8 inches cut from healthy rosemary plant and propagate it in water.

Don’t let the leaves touch the water. Keep the jar at a bright windowsill with not very long sun exposure.

Mint

Use a 4 to 5 inch cutting from an established mint and grow it in water. Put the jar near a sunny window.

Cilantro

You can grow it with seeds or cuttings-replace the water regularly and keep the jar in an area that’s bright, but not overly exposed to direct sunlight.

Fennel

In a shallow jar or dish, put a fennel bulb with the base down. Put it near a bright window and replace the water every 2 to 3 days.

Celery

Easily regrow your own celery using water-in 7 to 10 days; you'll notice miniature celery growing from the base.

Oregano

What is pizza without oregano, right? And, even better if we have some fresh nearby.

Use cuttings and set them in a jar filled with water. It will do well if you place it in a sunny area if you live in a colder climate; in warmer climates, partial shade will be awesome.
